

# Low vs HiDPI Resolution Screens

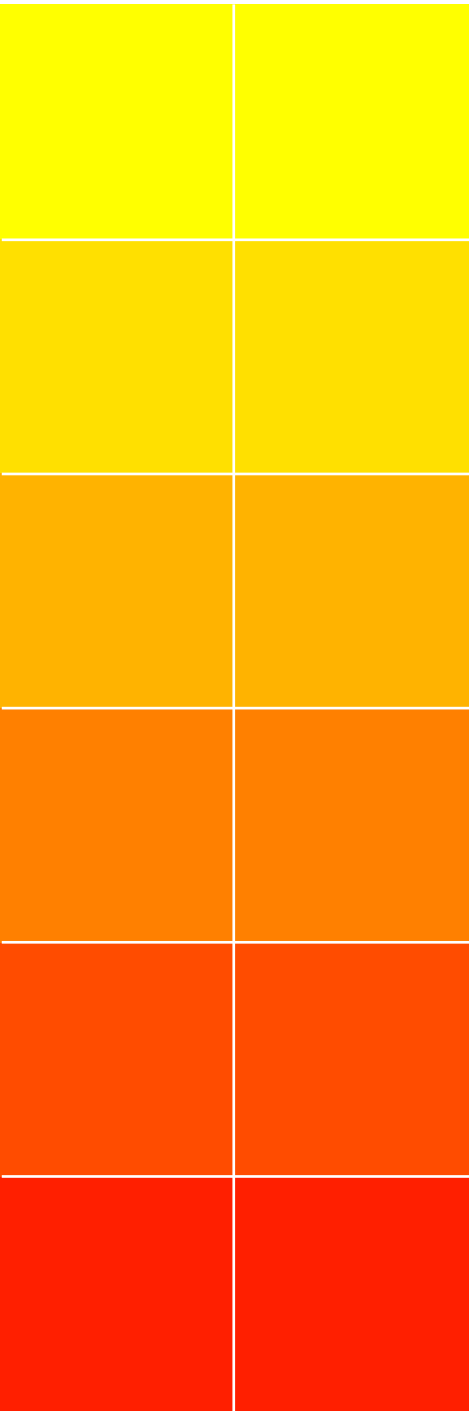

Non-Retina Display

Retina (HiDPI) Display

Retina graphic viewed at 100% on a Non-Retina Display

Apple’s Retina displays have twice as many pixels (2x) as Non-Retina displays.

Not all mobile devices are 2x. For example, 1.5x is still higher resolution than normal displays, but they have 3 pixels for every 2 pixels on lower-res displays.
